Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims #1 and 2 are drawn to a method for inspecting LSI's, classified in class 438, subclass 7.
- II. Claims #3-5, drawn to a defect inspection data analysis apparatus, classified in class 324, subclass 765.

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method claims of Group I can be practiced to create an entirely different device than that claimed in Group II. For example, the invention claimed in Group I can be practiced without the data storage means, claimed in Group II; i.e. input and output management by a human operator.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other groups, the restriction for examination purposes as indicated is proper.

Art Unit: 2812

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
